I spoke with GA EPD today and they are questioning the accuracy of the 88.5 ppb number. They believe the actual value could be as low as 6.2 ppb (below the 15 Action Level). GA EPD plans to scrutinize Atlanta's sampling locations and analytical results, as well as other water quality monitoring to ensure compliance determinations and reported data are accurate. It will likely be sometime next week before EPD can confirm with certainty whether or not this is a data error.

I have contacted the drinking water program lead contacts in HQs to alert them to the concerns and to ensure they know we are engaged with the state on this.

**Subject:** Heads Up: Lead Action Level Exceedance

Trey, Mary, Blake, Brandi and Allison:

From the most recent upload of the Safe Drinking Water Information System we have identified a lead action level exceedance in the City of Atlanta. While this is not a violation, we think it has the possibility to get attention. We are in the process of reaching out to GAEPD on this issue. The level we are seeing in the data is 88.5 ppb compared to a lead action level of 15 ppb. We will follow up with you once we talk to GA. Brian Smith is my primary POC on this issue.

Thanks  
Jeaneanne
